

Silver Non Cyanide Plating Solution

Gold Plating Services - Non Cyanide Silver Plating Solution deposits a fine silver plate directly onto copper, silver, brass, bronze and gold. It provides a finish that is easily polished with a polishing cloth. A pure silver or stainless steel anode is necessary to avoid contaminating the solution.

Strength: - Available in regular strength.

Use Notes: Prior to plating the surface must be polished to the desired luster, electrocleaned, & properly activated.

Operating Conditions

Temperature	Room Temperature
Time	30 seconds to 2 minutes
Voltage	3 - 5 Volts
Current Density	N/A
Filtration	Optional
Anode	Type 316 Stainless Steel or Silver
Agitation	Some relative movement between work.

Read and understand SDS sheets before using. For professional use by trained technicians only.
